

Pipe competence for prefabricated rigid and flexible pipe systems with or without heat insulation

To react optimum to the customer's wishes, Brugg Rohrsysteme works in four industrial fields. The largest turnover is from the strategic business field, short-distance and long-distance energy. Here, Brugg is the fourth largest in the world. The other areas are industry, gas stations and domestic technology. With almost 40 pipe systems and 20000 items, Brugg offers the widest range in the market.

About 50% of the production is exported to North and Central Europe, North America and increasingly to Asia. We have distribution centres and cooperate with over 30 export partners in 20 countries.

Brugg produces flexible and rigid pipe systems made of metal and plastic at two locations. In Swiss Kleindöttingen close to Brugg (top picture) and in Germany in Wunstorf in Hanover (bottom picture).

Services

In all four business fields, our agencies provide support to our customers. The pipe systems are installed either by our own fitters or by pipe layers trained by Brugg.

Brugg offers comprehensive services in the project phase to production engineers, plant manufacturers and operators, so that all legal and technical standards are implemented.

We also help determine and survey the lines. Installation, survey and maintenance of monitoring systems are also included in our services.

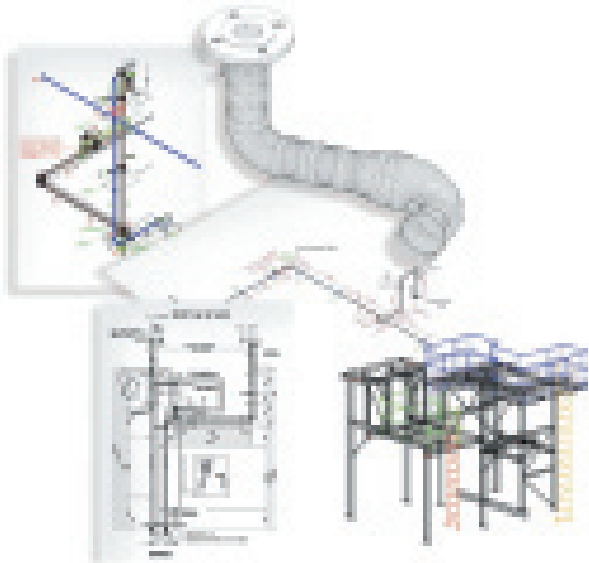

The manufacture, delivery and assembly of heat-insulated or even double-walled pipe systems, whether flexible or rigid, demand optimum cooperation of production engineers, masons as well as manufacturers of pipe systems.

As cooperation partner with long years of experience in the field, Brugg Rohrsysteme coordinates all aspects of the project and thus gives the customer space for the actual planning work.

Everything under one roof - System solutions for the industry

The necessity for cost efficiency makes the industry look for more and more system solutions in the plant and pipe system construction. The - everything under one roof principle reduces costs, the customer deals with only one contact person. Because of its large range of products for flexible and modular rigid systems, Brugg Rohrsysteme can offer the most efficient solutions for transporting all kinds of liquids.

Our specialists and engineers assist the customer from the initial site inspection, to planning, installation and commissioning. Together with the customers, we develop systems in the delivery and disposal segments.

With the help of our installation specialists or with competent collaboration with the appropriate specialised shops, we furnish customer-specific system solutions right up to completion.

Safety through competence

Numerous laws and standards control the construction and operation of pipe systems in the industry.

Our customers are not always aware of the applicable regulations. Laying piping networks (heat losses, heat insulation, static, stability, ...), development and planning.

With Brugg Rohrsysteme you can play it safe

We are the competent partners for transporting hazardous liquids. Our double-walled pipe systems with maximum security are equipped with leak monitoring systems.

Our customers have planning security through an approved system. All approvals for the acceptance and commissioning of systems are clear. Any industrially manufactured system is provided with all necessary expert tests and qualification tests by our factory.

Double-walled pipe systems, fully monitorable, provide maximum safety and ensure speed in the construction phase.

As manufacturer of flexible and rigid pipe systems, we place great importance of environment protection. Both during safe transport of critical media in our double-walled safety pipes and during manufacture at our factories in Germany and Switzerland, our entire attention is focused on environmental protection.

Qualified consultation and support from planning start up to commissioning - this is what the Brugg label stands for:
